

Preface to the First Edition	vii
Preface	viii
Acknowledgments	ix
Milestones in the Radiation Sciences	1

## SECTION I

### **For Students of Diagnostic Radiology, Nuclear Medicine, and Radiation Oncology**

<b>1</b>	Physics and Chemistry of Radiation Absorption	5
<b>2</b>	DNA Strand Breaks and Chromosomal Aberrations	16
<b>3</b>	Cell Survival Curves	30
<b>4</b>	Radiosensitivity and Cell Age in the Mitotic Cycle	47
<b>5</b>	Repair of Radiation Damage and the Dose-Rate Effect	60
<b>6</b>	Oxygen Effect and Reoxygenation	85
<b>7</b>	Linear Energy Transfer and Relative Biologic Effectiveness	106
<b>8</b>	Acute Effects of Total-Body Irradiation	117
<b>9</b>	Radioprotectors	129
<b>10</b>	Radiation Carcinogenesis	135
<b>11</b>	Hereditary Effects of Radiation	156
<b>12</b>	Effects of Radiation on the Embryo and Fetus	168
<b>13</b>	Radiation Cataractogenesis	181
<b>14</b>	Doses and Risks in Diagnostic Radiology, Interventional Radiology and Cardiology, and Nuclear Medicine	187
<b>15</b>	Radiation Protection	224

## SECTION II

### **For Students of Radiation Oncology**

<b>16</b>	Molecular Techniques in Radiobiology	240
<b>17</b>	Cancer Biology	274

<b>18</b>	Dose–Response Relationships for Model Normal Tissues	303
<b>19</b>	Clinical Response of Normal Tissues	327
<b>20</b>	Model Tumor Systems	349
<b>21</b>	Cell, Tissue, and Tumor Kinetics	363
<b>22</b>	Time, Dose, and Fractionation in Radiotherapy	378
<b>23</b>	Predictive Assays	398
<b>24</b>	Alternative Radiation Modalities	407
<b>25</b>	Radiosensitizers and Bioreductive Drugs	419
<b>26</b>	Gene Therapy	432
<b>27</b>	Chemotherapeutic Agents from the Perspective of the Radiation Biologist	440
<b>28</b>	Hyperthermia	469
	Glossary	491
	Index	521
